

Cycleway mean Peak-time PM pollution

Interpolated means for PM-pollution of Münster cycleways for the time of November 1st 2024 to January 31st 2025

This map displays an average of average PM-pollution during peak times on cycleways throughout the city of Münster. The peak times examined are each day from 07:00-09:00 and 15:00-17:00. While derived from PM_{2.5} measurements, the means are normalized from 0 to 1 and are not indicative of true PM pollution in $\mu\text{g}/\text{m}^3$, rather they serve as an index illustrating city areas of higher and lower PM pollution.
